Life Skills. Education. Work Exposure.

Promoting Opportunities for Candidates

Our Youth Employment System (YES) software automates and streamlines the employment application process, allowing you to connect participants with more opportunities faster. All your content in YES is backed up securely in the Amazon Web Services Cloud. YES's features allow you to do everything in one place, including auto-matching, timesheet tracking, and video conferencing.

Do More with YES:

- Enable **organizations** like yours to auto-match candidates to positions based on the criteria of employers and applicants; easily manage and update content on the user-friendly homepage
- Enable **job candidates** to easily register and submit job applications; stay informed of their application statuses via automated emails and text messages; submit their timesheets in a timely manner
- Enable **employers** to easily register and post job openings; process job applications quickly to find the right candidates; access customizable reporting; conduct interviews via the video conferencing tool; approve submitted timesheets

Client Success

YES enables our clients to streamline and scale their programs. The number of applications they manage and process has multiplied.

Baltimore Mayor's Office of Employment Development — Since we transitioned the YouthWorks program from using manual paper processes to web-based YES in 2011, the program has grown from processing a few thousand applications to 16,000 per season.

City of Wilmington Youth Career Development Program + Food & Nutrition Program — Wilmington has been using YES since 2019.
